

Trim & Form

Automatic To Manual Services

SemiPack's capabilities range from fully automatic to manual processing; extensive cropping and forming capabilities; active and passive component processing; axial to radial lead forming servicing; and snap-in and stand-off forms.

SMT Processing

For SMT processing, SemiPack offers **lead straightening and restoration to data sheet specifications for both J-lead and gull wing devices. We also provide trim and form processes on flat pack (frame pack) devices.**

SSI has a wide variety of trim and form **tooling, including tooling for fine pitch devices.**

Trim and Form For Axial and Radial

For through-hole devices, SemiPack offers **trim and form processes for both axial and radial lead devices.**

Jumper Manufacturer

SemiPack also manufactures jumpers. Our unique design allows the jumper wires to sit straight after insertion on the board and not sway from side to side.
